

Psychologie de la Diversité

De l'isolement social au stigmat

Les conséquences des préjugés...

Calendrier (Q1, lundi 9h – 10h30)

Introduction générale	14-9
Pourquoi? Lien social & stigmat	21 & 28-9
Catégorisation (principalement la race)	12 & 19-10; 9, 23 & 30-11
Sexisme (principalement les femmes)	7-12
	((14-12))

Boden-Albala, B., Litwak, E., Elkind, M. S. V., Rundek, T., & Sacco, R. L. (2005). Social isolation and outcomes post stroke. *Neurology*, 64(11), 1888-1892.
<https://doi.org/10.1212/01.WNL.0000163510.79351.AF>

- Follow-up of the Northern Manhattan Stroke Study (1993-1997) for the next 5 years (N = 655)
- Stroke cases were identified through a comprehensive prospective surveillance system including both hospitalized and non-hospitalized stroke.
- **265 Outcomes.** “An outcome event was defined as the first occurrence of a recurrent stroke, myocardial infarction, or death after the initial incident ischemic stroke.”

Characteristics	n (%)
Demographics	
Age >65 y	360 (55)
Female	360 (55)
Hispanic	354 (54)
African American	117 (27)
White	114 (18)

We defined **social isolation as knowing fewer than three people well enough to visit with in their homes**; and socialization included the question “How many times did you visit with people over the last week?”

	Hazard ratio	95% CI	<i>p</i> Value
Atrial fibrillation	1.6	1.1–2.2	0.007*
Requiring help at home	1.5	1.1–2.0	0.006*
Social isolation	1.4	1.1–1.8	0.02*

This model is adjusted for age.

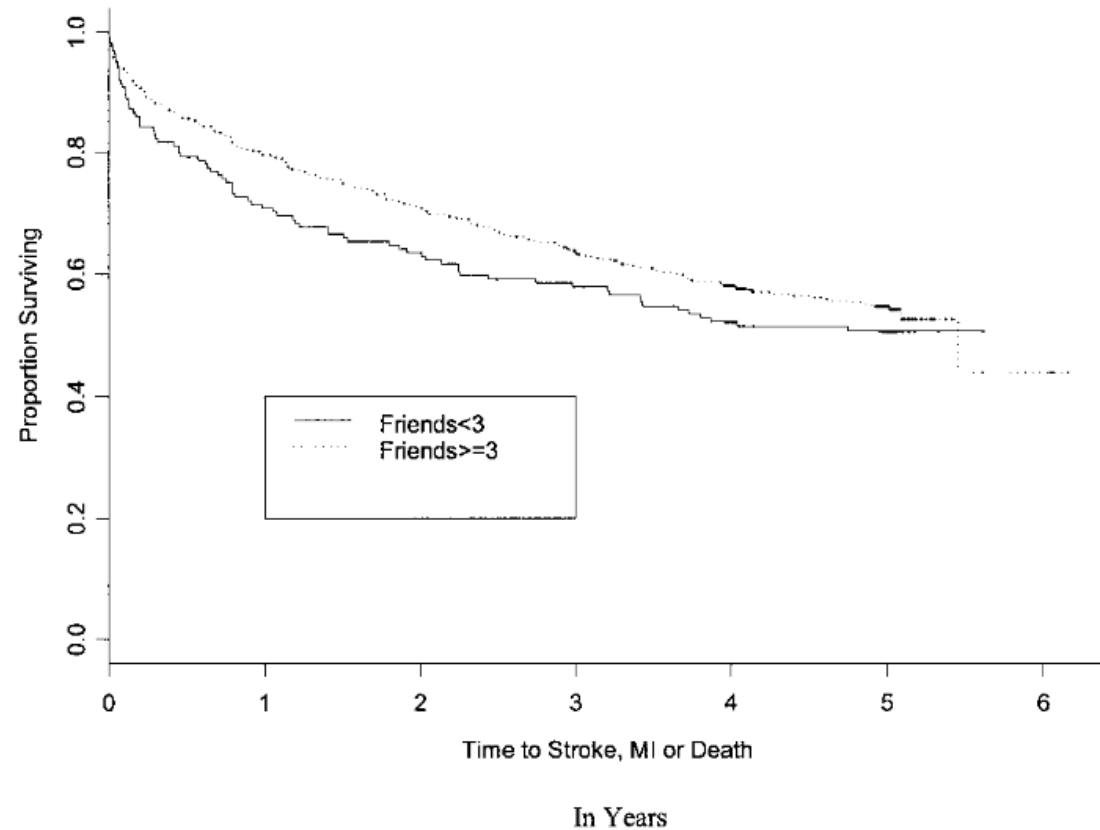

Figure. Kaplan–Meier survival curve of stroke, myocardial infarction (MI), or death after ischemic stroke.

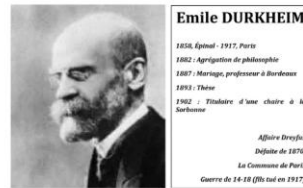

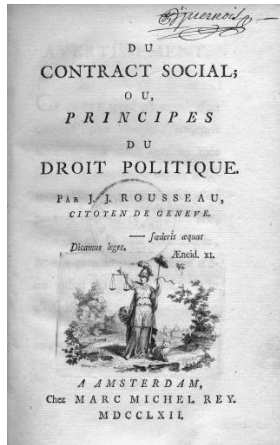

- “... social isolation was associated with a 30-day event rate of 13% compared to a 5% event rate for those with three or more friends.”
- “At 1 year, an event rate of 31% was seen among the isolated group vs an event rate of 18% among those with three or more friends.”

Holt-Lunstad, J. (2023). National Health Guidelines for Social Connection: What Is the Evidence in Support and What Might the Guidelines Say? *Policy Insights from the Behavioral and Brain Sciences*, 10(1), 41–50.

Isolement & Solitude / Exclusion Sociale & Ostracisme / Stigmatisation

→ **Lien social / L'inclusion** comme facteur de risque (si absent)
& comme facteur de protection (si présent)

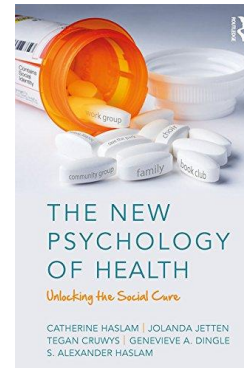

Emile Durkheim	
« le sociologue du lien social »	
1893	De la division du travail social
1897	Le suicide
1912	Les formes élémentaires de la vie religieuse
Écrits sur l'éducation et la pédagogie	

1895
Les règles de la méthode sociologique
Jean-Michel Durkheim : 1995 (Durkheim, L'enseignement de la sociologie à Sorbonne (1995))

LE LIEN SOCIAL
Serge Paugam

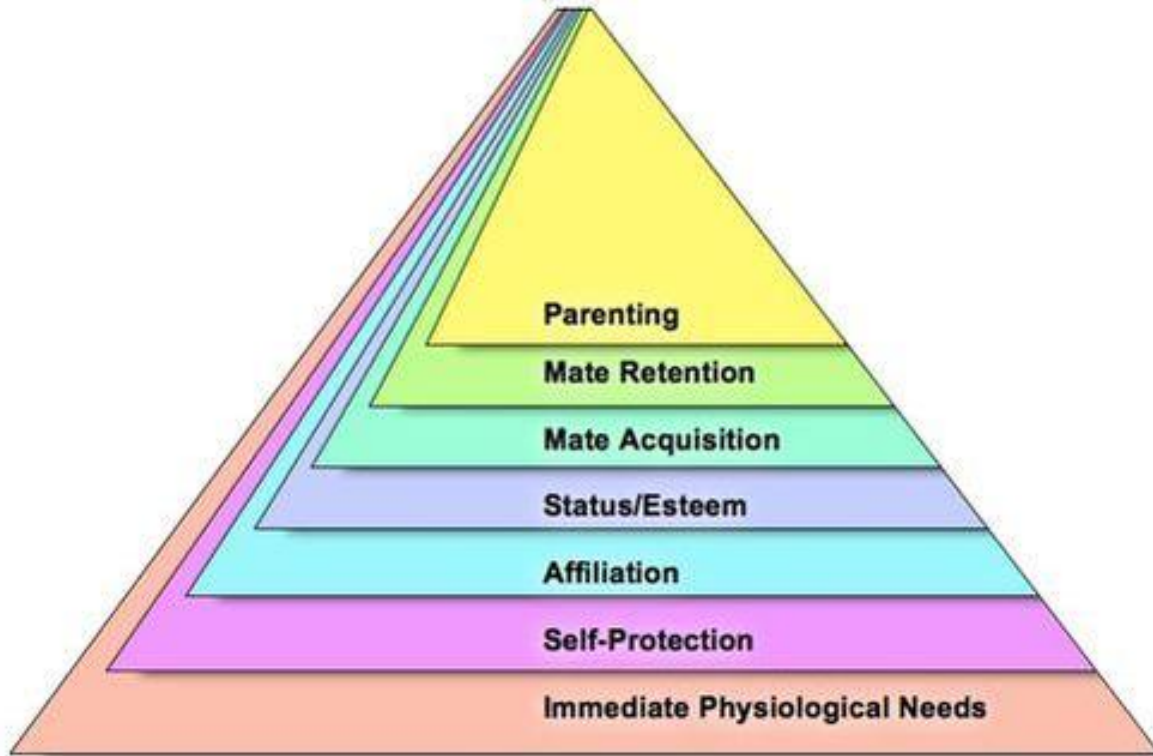

Le lien social ... et son absence

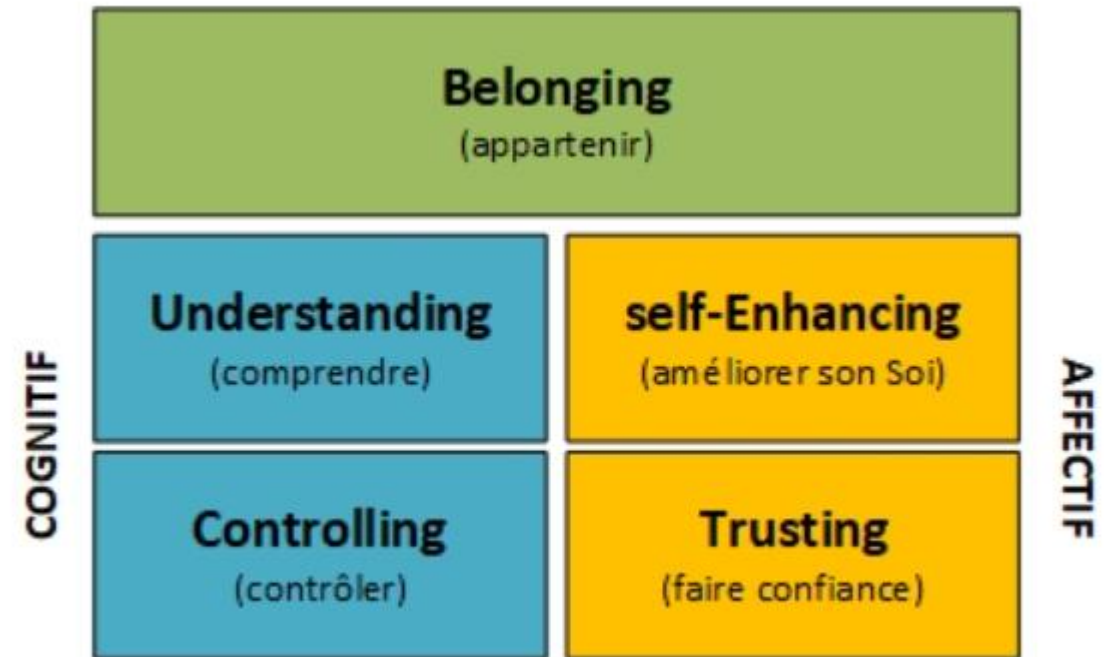

- STRUCTUREL : **l'isolement social objectif** réfère à une carence de contacts interpersonnels. Il s'agit d'un paramètre objectif (par ex, seul vs. en couple)...
- FONCTIONNEL : **l'isolement social subjectif (solitude)** est la version psychologique de l'isolement social, c'est-à-dire que ce n'est pas seulement la quantité de contacts qui est en jeu, mais surtout une insatisfaction face à la qualité des rapports sociaux... (même si la solitude peut être choisie).
- « QUALITATIF » : **Ostracisme, exclusion sociale & stigmatisation**, c'est l'action de tenir quelqu'un qui *ne plaît pas* à l'écart d'un groupe, d'une organisation, d'une société, ...

<https://journals.plos.org/plosmedicine/article?id=10.1371/journal.pmed.1000316>

Structural	<i>The existence and interconnections among differing social ties and roles</i>		
Marital status	married versus other		• Binary item: Married yes, no • Married, never married, divorced, separated, widowed
Social networks	network density or size, number of social contacts		• Convoy measure [223] • Social Network List [224]
Social integration	Participation in a broad range of social relationships; including active engagement in a variety of social activities or relationships, and a sense of communality and identification with one's social roles.		• Malmo Influence, Contact, & Anchorage Measure [225] • Social Network Index [226,227] • Social Participation Scale [92]
Complex measures of social integration	A single measure that assesses multiple components of social integration such as marital status, network size and network participation.		• Social Network Index [36] • Social Network Questionnaire [228] • Social Connections Index [102] • Rand Social Health Battery [229]
Living alone	Living alone versus living with others		• Binary item: yes, no • Number of people in household
Social isolation	Pervasive lack of social contact or communication, participation in social activities, or confidant		• Social Isolation Scale [82]
Combined	<i>Assessment of both structural and functional measures</i>		
Multifaceted Measurement	Multiple measures obtained that assess more than one of the above conceptualizations.		

Table 2. Descriptive coding of the measures used to assess social relationships.

Type of Measure	Description	Example of Measure
<i>Functional</i>	<i>Functions provided or perceived to be available by social relationships</i>	
Received support	Self-reported receipt of emotional, informational, tangible, or belonging support	• Inventory of Social Supportive Behaviors [213] • UCLA Social Support Interview [214,215] • Social Support Behaviors Scale [216]
Perceptions of social support	Perception of availability of emotional, informational, tangible, or belonging support if needed.	• EPESE support questions [217] • Malmo Social Support Scale [218] • Social Support Questionnaire [219] • Interpersonal Support Evaluation List [220]
Perception of loneliness	Feelings of isolation, disconnectedness, and not belonging	• Loneliness Scale [221] • UCLA Loneliness Scale [222]

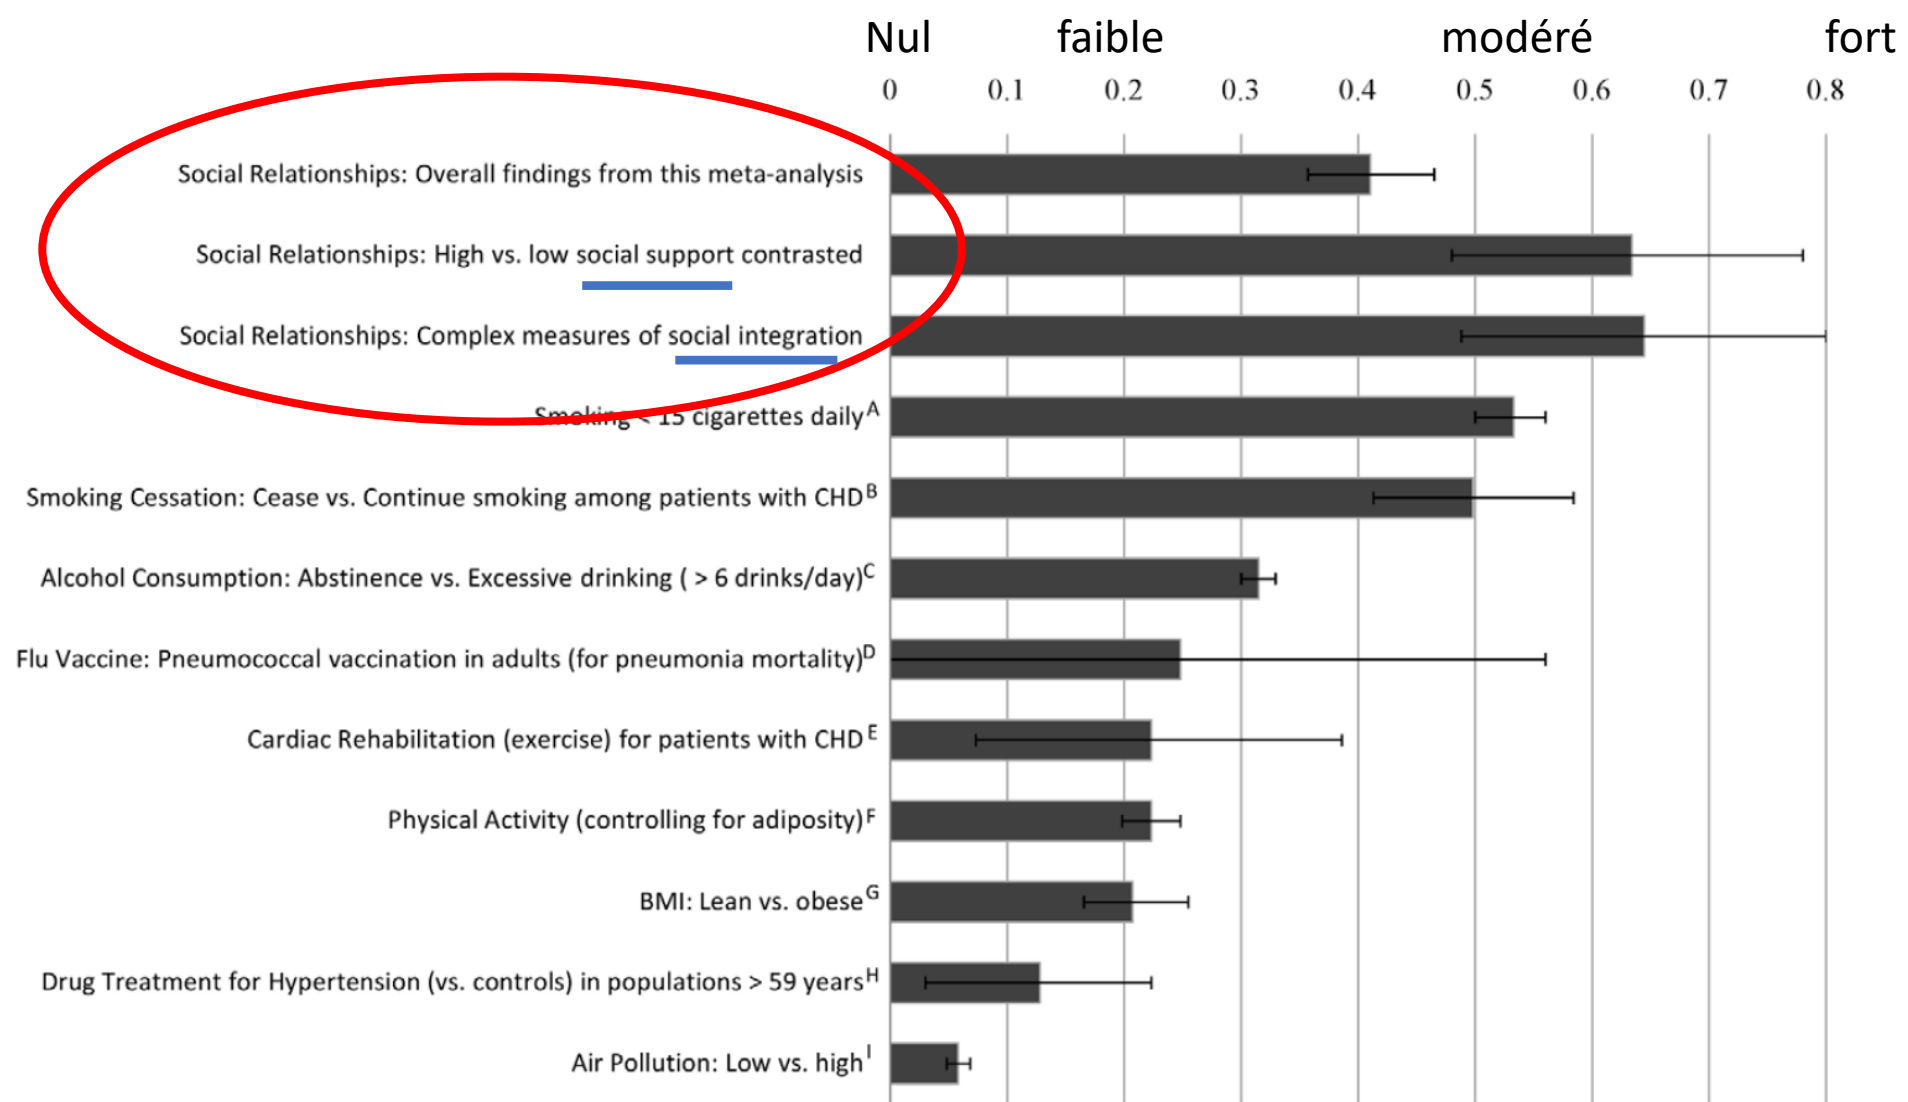

Figure 6. Comparison of odds (lnOR) of decreased mortality across several conditions associated with mortality. Note: Effect size of zero indicates no effect. The effect sizes were estimated from meta analyses: ; A = Shavelle, Paculdo, Strauss, and Kush, 2008 [205]; B = Critchley and Capewell, 2003 [206]; C = Holman, English, Milne, and Winter, 1996 [207]; D = Fine, Smith, Carson, Meffe, Sankey, Weissfeld, Detsky, and Kapoor, 1994 [208]; E = Taylor, Brown, Ebrahim, Jolliffe, Noorani, Rees et al., 2004 [209]; F, G = Katzmarzyk, Janssen, and Ardern, 2003 [210]; H = Insua, Sacks, Lau, Lau, Reitman, Pagano, and Chalmers, 1994 [211]; I = Schwartz, 1994 [212].

Jean M. Twenge
San Diego State University

Christopher K. Nuss
University of Minnesota

The « life-alone » paradigm

“You’re the type who will end up alone later in life. You may have friends and relationships now, but by your mid-20s most of these will have drifted away. You may even marry or have several marriages, but these are likely to be short-lived and not continue into your 30s. Relationships don’t last, and when you’re past the age where people are constantly forming new relationships, the odds are you’ll end up being alone more and more. (Baumeister et al., 2002)”

Ostracism Increases Automatic Aggression: The Role of Anger and Forgiveness

Denghao Zhang^{1}, Sen Li², Lei Shao¹, Andrew H. Hales³, Kipling D. Williams⁴
and Fei Teng^{5*}*

The participants who were included were told,
“Congratulations! Everyone chose you as the partner they’d like
to work with.”

Those who were ostracized were told, “I hate to tell you this,
but no one chose you as the partner they’d like to work with”

« Hyper-sensibilité » à l'ostracisme

Happy	1	2	3	4	5
Sad	1	2	3	4	5

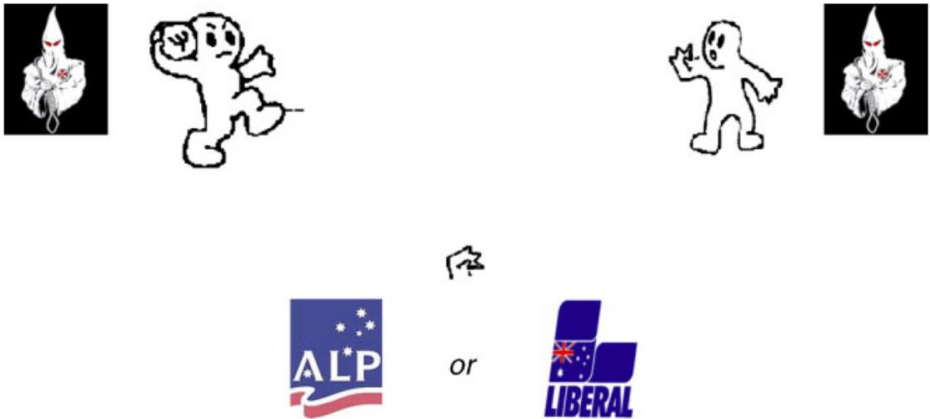

Psycho

Avec quelles conséquences (*coping*) ?

Court terme

- **behave aggressively** (Buckley, Winkel, & Leary, 2004; Twenge, Baumeister, Tice, & Stucke, 2001).
- **less likely to act in prosocial ways**, such as cooperating with someone or providing help (Twenge, Ciarocco, Cuervo, & Baumeister, 2003) and cooperated less in a mixed-motive game with another student (Twenge et al., 2007).
- exhibit an assortment of **cognitive deficits** such as impaired logical reasoning (Baumeister, Twenge, & Nuss, 2002).
- show **distorted time perception**, an emphasis on the present rather than the future, a seemingly lethargic passivity, and an avoidance of self-awareness (Twenge, Catanese, & Baumeister, 2003).
- exhibit **self-destructive tendencies**, as indicated by various increases in self-defeating behaviors such as foolish risk taking and unhealthy choices (Twenge, Catanese, & Baumeister, 2002).
- Cause **decrements in self-regulation** (Baumeister et al., 2005)
- **Work harder** in a team (only female Pp, Karau & Williams, 1993) to gain attention

- **Ostracism by outgroup members is no less aversive than ostracism by ingroup members** (Smith & Williams, 2004; Williams et al., 2000, 2002) but recovery is faster if ostracized by outgroup (Gonsalkorale et al., 2008)
- **Even when outgroup members are despised members of the KKK (Gonsalkorale & Williams, 2007)**

	Ostracism		
	Despised (n = 16)	Rival (n = 16)	Ingroup (n = 17)
Belonging ^a	2.25 (1.16)	2.08 (1.13)	2.59 (1.20)
Self-esteem ^a	2.23 (0.96)	2.21 (0.98)	2.67 (0.95)
Control ^a	1.75 (0.81)	1.35 (0.35)	1.57 (0.47)
Meaningful existence ^a	2.46 (0.80)	2.15 (1.14)	2.61 (1.17)
Mood ^b	4.44 (1.41)	3.83 (1.52)	5.10 (1.33)

Avec quelles conséquences ?

Long terme

The « life-alone » paradigm :

- Negative affect appears to be missing. Participants become affectively “numbed”
- Lack of self-regulation
- ?

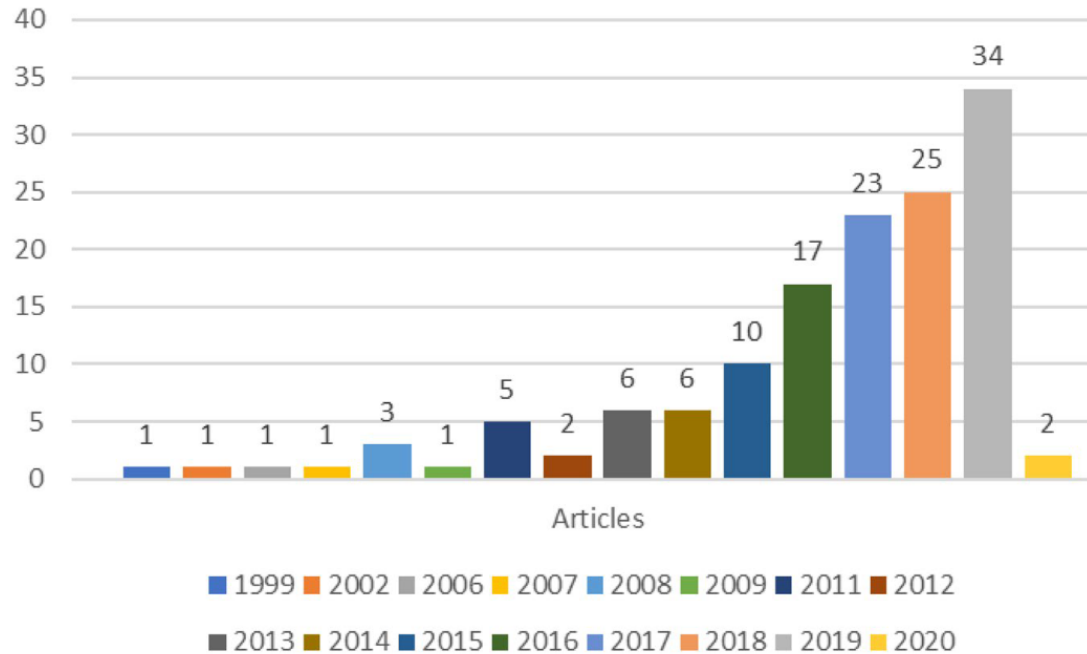

Qu'est-ce qui « prolonge » les effets de l'exclusion ?

- Facteurs internes
 - Revivre l'épisode en pensée (événements extérieurs ou ruminations)
 - Aggression, prise de risque impulsive, recherche de solitude, etc
 - ...
- Facteurs externes
 - La « subtilité » de l'exclusion (ne pas parler à plutôt que d'être agressif envers)
 - La répétition dans le temps
 - La non reconnaissance officielle (absence de support externe)

Le lien social ... et son absence

- STRUCTUREL : l'isolement social objectif réfère à une carence de contacts interpersonnels. Il s'agit d'un paramètre objectif (par ex, seul vs. en couple)...
- FONCTIONNEL : l'isolement social subjectif (solitude) est la version psychologique de l'isolement social, c'est-à-dire que ce n'est pas seulement la quantité de contacts qui est en jeu, mais surtout une insatisfaction face à la qualité des rapports sociaux... (même si la solitude peut être choisie).
- « QUALITATIF » : **Ostracisme, exclusion sociale & stigmatisation**, c'est l'action de tenir quelqu'un qui *ne plaît pas* à l'écart d'un groupe, d'une organisation, d'une société, ...

Définition

- L'ostracisme, se moquer, abuser verbalement, agresser, harceler... sont des formes particulières de supervision abusive et de déviance interpersonnelle
- L'ostracisme peut être délibéré mais plus souvent avec subtilité et parfois de manière relativement passive, sans nécessairement une volonté de nuire ni motif particulier...
- Souvent une zone « grise » pour l'entreprise...
 - « cold violence »
 - “form of silent mistreatment ... deliberate (or not) denied social interaction with others.”
 - « feeling of being **overlooked, excluded, or ignored** by others, that is, **INVISIBLE** »

Inactions to socially engage another (Robinson et al., 2013; Robinson & Schabram, 2017)

- ➔ BUT “The experience of ostracism occurs only when another violates social norms that suggest one should acknowledge, respond to, or include another.”
- ➔ BUT “... ostracism is the **omission of positive attention** from others rather than the commission of negative attention.”
- ➔ It creates ***ambiguity*** about not only why it happened but also, more important, whether it even happened at all.
 - ➔ Ruminations
 - ➔ More difficult to address and resolve

Formes & mesure

- Linguistique/culturelle : quand 2 personnes parlent une langue inconnue d'une troisième
- « Mise au placard »
- Ne pas avoir été prévenu d'une réunion
- Ne pas parler à
- Ne pas être invité à une activité after work ou à un déjeuner
- Travailler seul·e sur un projet « inutile »
- Sortir de la pièce quand on y rentre
- Ne pas être sur (ou être enlevé de) la liste d'emails
- ...

The Development and Validation of the Workplace Ostracism Scale

D. Lance Ferris, Douglas J. Brown, Joseph W. Berry, and Huiwen Lian
University of Waterloo

Substantively Valid Ostracism Items

1. Others ignored you at work.
 2. Others left the area when you entered.
 3. Your greetings have gone unanswered at work.
 4. You involuntarily sat alone in a crowded lunchroom at work.
 5. Others avoided you at work.
 6. You noticed others would not look at you at work.
 7. Others at work shut you out of the conversation.
 8. Others refused to talk to you at work.
 9. Others at work treated you as if you weren't there.
 10. Others at work did not invite you or ask you if you wanted anything when they went out for a coffee break.
 11. You have been included in conversations at work (reverse coded).*
 12. Others at work stopped talking to you.*
 13. You had to be the one to start a conversation in order to be social at work.*
-

« Motifs » multiples

- Contrôler, représailles, punition
- Protection de soi: éviter le conflit ou une émotion désagréable, éviter une interaction bizarre, protéger son groupe d'un individu particulier
- Aucun motif... distraction, préoccupation, ne pas être intéressé par les contacts en général, ne pas comprendre la norme ou le script social (Goffman, 1959)

“People who are unreliable, who act on selfish impulses, who break moral or legal rules, who fail to keep promises, who subject others to emotional outbursts, who exhibit inappropriate aggressive actions, and who in other ways fail at self-regulation are often rejected or excluded by others” (Baumeister et al., 2005, p. 601).

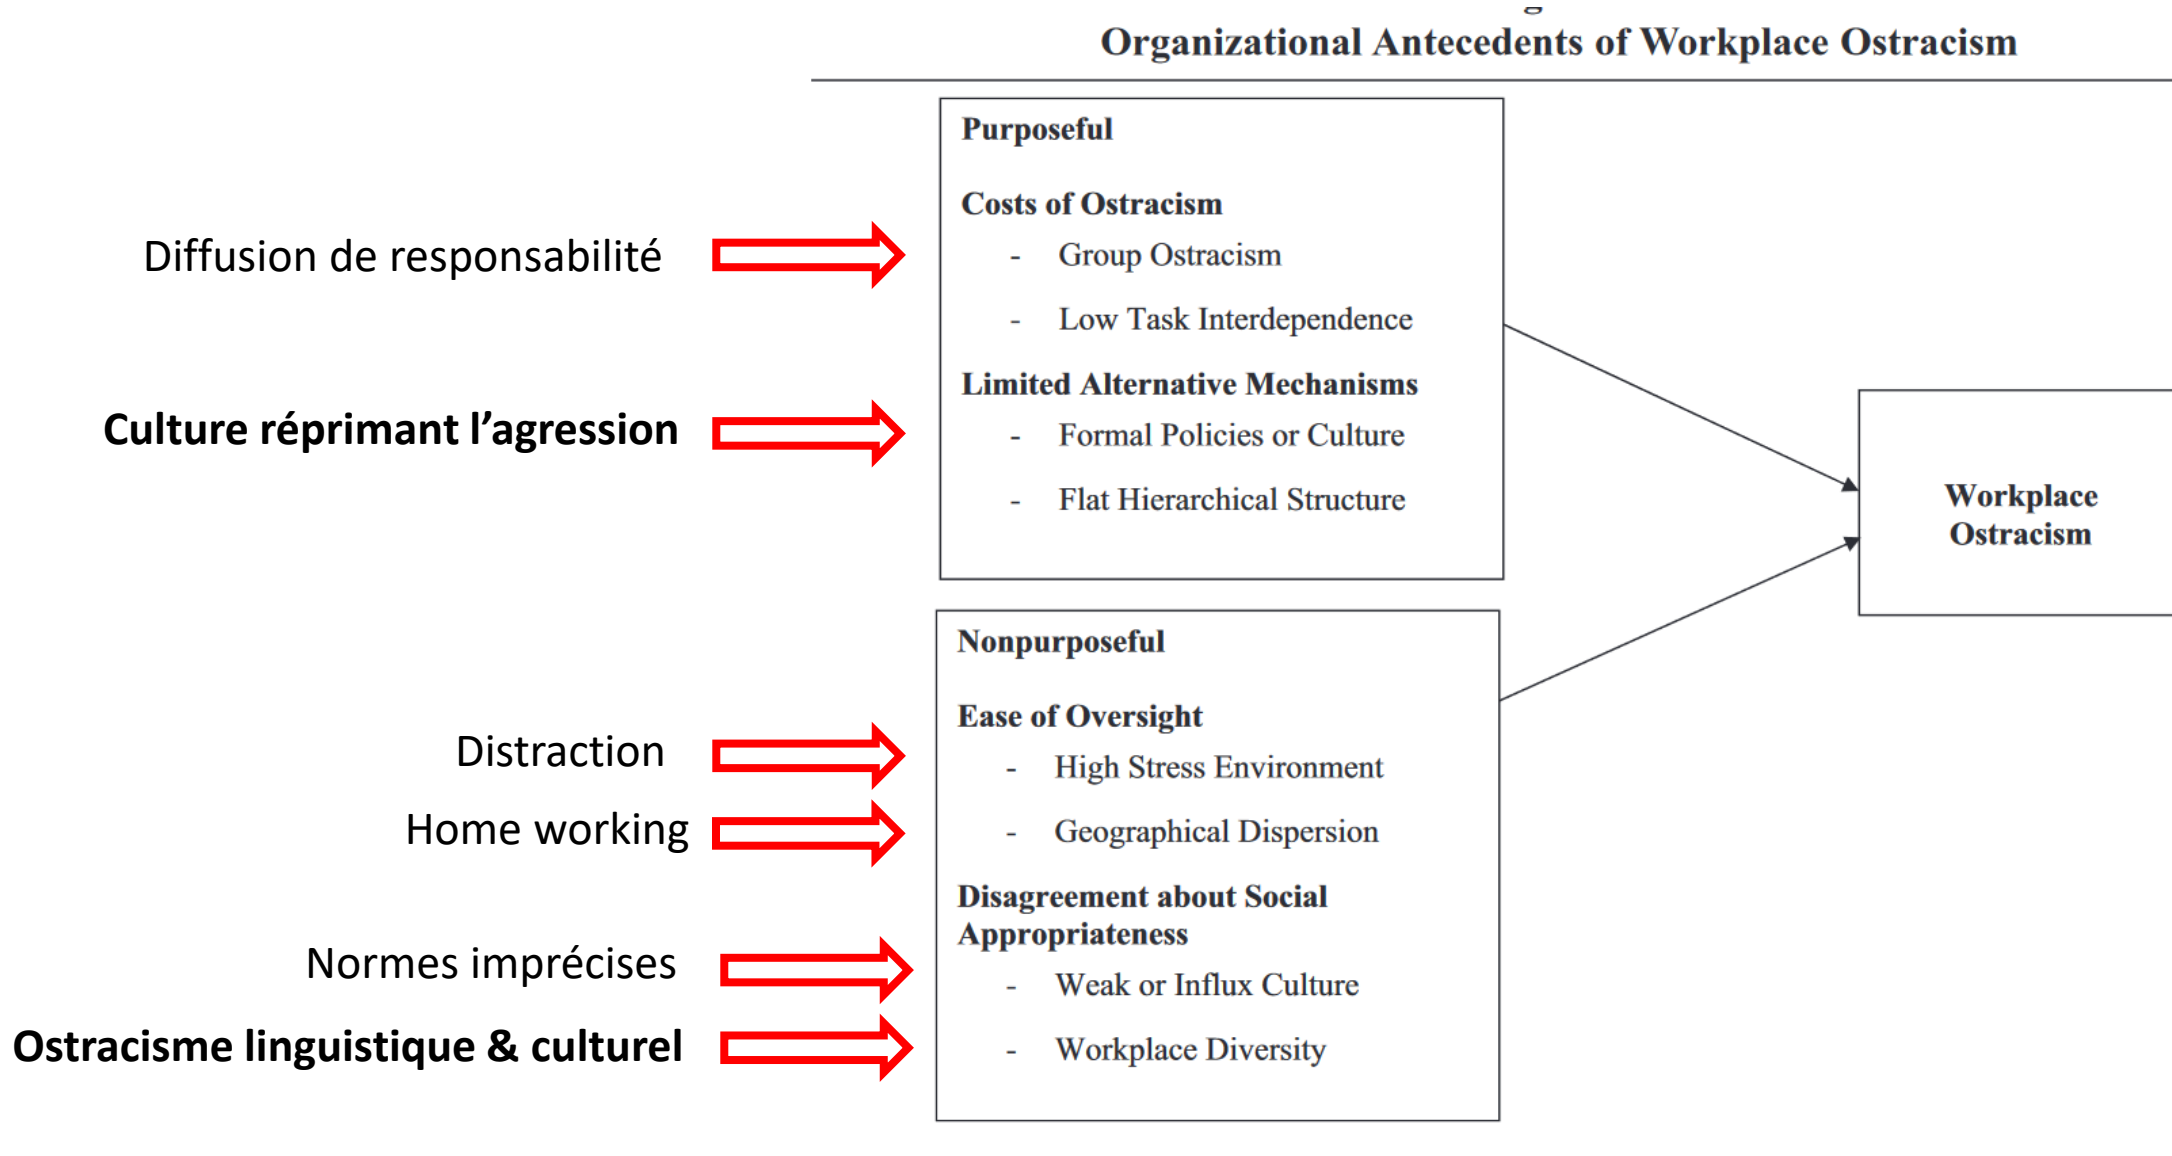

Victimes

Tout qui est un tant soit peu « différent »...

- Minorité
- Autre langue
- Handicap
- Problème de santé
- Faible estime de soi
- Celui qui est toujours de mauvais poil, peu agréable, introverti
- Celui qui ne travaille pas assez, ou de trop
- ...

Facilitateurs organisationnels

Théorie de l'identité sociale (Tajfel & Turner, 1986) –

Jusqu'à présent, ostracisme pour
n'importe quel motif, voire aucun!

→ Erwin Goffman: **Stigmaté** (1963)

« Marque durable que laisse sur la peau
une maladie, une plaie. »

→ Toute marque, toute trace qui révèle une dégradation/identité SOCIALE honteuse/négative.

- Il y a une différence non désirée mais reconnue
- Elle est dévaluée (« deeply discrediting »)...
- ... lors de (**certaines**) interactions sociales car vu comme “not quite human” et donc cibles légitimes de discrimination
 - Soit de manière « hostile » (rejet social, discrédit, dé-humanisation, etc)
 - Soit de manière « subtiles » (expression non verbale d'inconfort)
- Afin de conserver la hiérarchie sociale, renforcer la norme de l'ingroupe, positiver son groupe, rejeter les autres, etc

Stigmatisme ≈ Préjugé & stéréotype

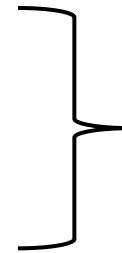

(Phelan et al., 2008)

- **Processus de renforcement de la norme** (comportement déviant, par ex. transgenre), rejet de la maladie (mentale, physique) et plus généralement de toutes déviations négatives

- Processus de dominance inter groupe (race, sexe)
- PAS nécessaire d'avoir une déviation négative

→ Ostracisme et exclusion de par **l'appartenance/identité à un groupe** « normativement déviant », n'importe lequel...

Avec globalement des conséquences identiques à celles de l'ostracisme (*stress & menace*)

...

Modèle dynamique de la stigmatisation

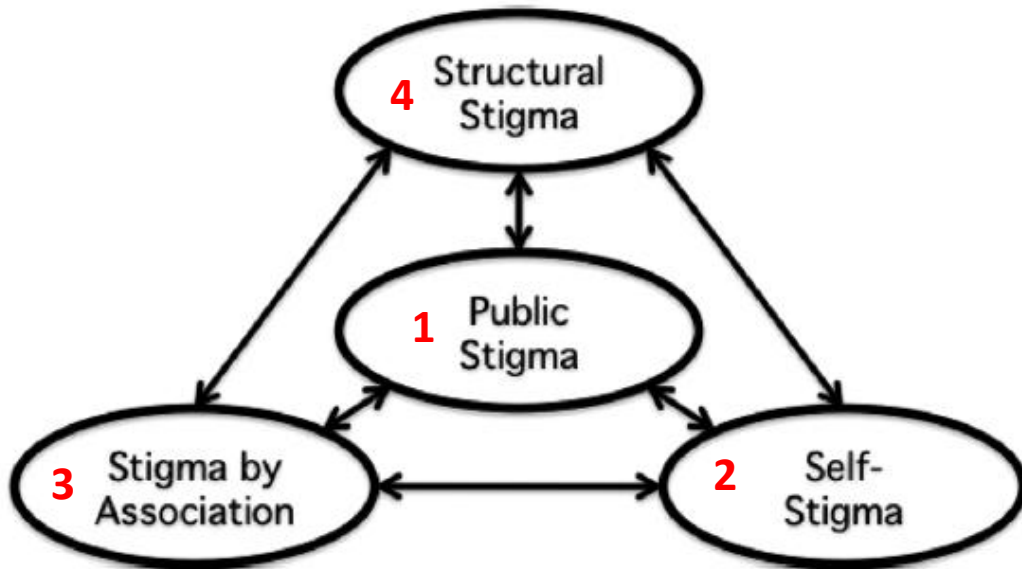

FIGURE 1 Four types of stigma (based on Pryor & Reeder, 2011).

1. Représentation / image négative menant à des émotions négatives en fonction des *caractéristiques* du stigmaté...

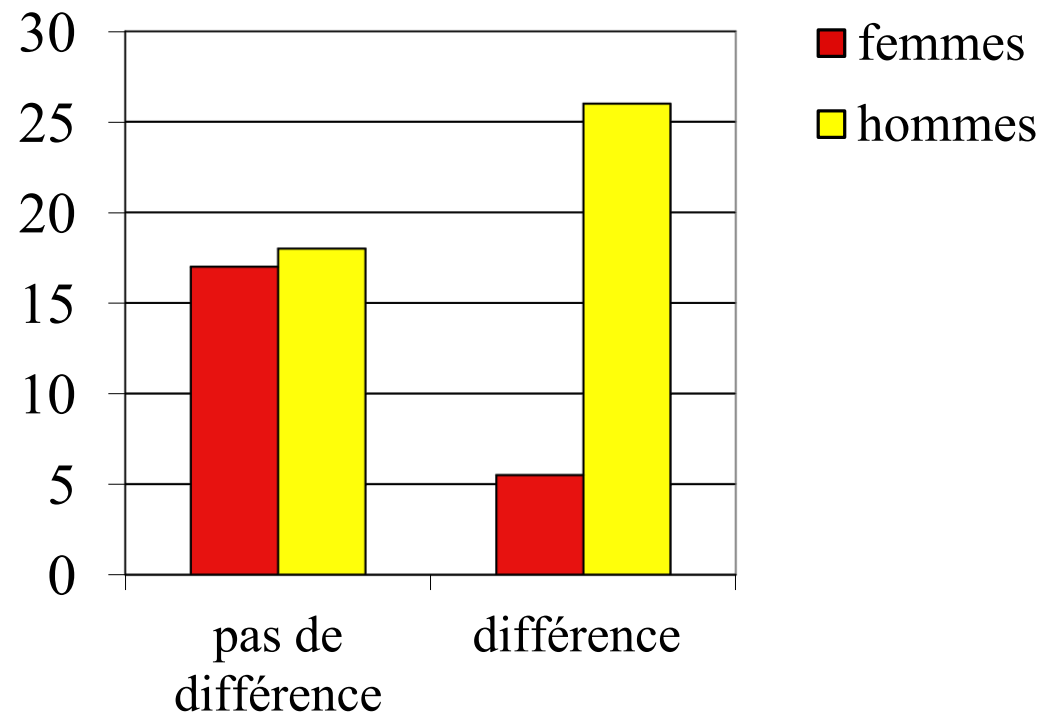

2. Et qui peut conduire à l'anticipation voire l'internalisation du stigmaté (ainsi qu'à des *mécanismes de défense - coping*), en fonction de ...

3. ... qui peut s'étendre par association

4. ... perpétuée par la société et ses institutions.

Conséquences: La *menace* du stéréotype

(Steele & Aronson)

comportementale du stigmat

Perceptions of the Impact of Negatively Valued Physical Characteristics on Social Interaction

Robert E. Kleck and Angelo Strenta
Dartmouth College

... more participants were classified as ***clinically*** impaired in the negative condition (28%, $n = 10$) than in the positive condition (8%, $n = 3$), ($\chi^2(1) = 4.60$, $p = .032$)

Fresson, Dardenne, Geurten & Meulemans (2017)
The effect of stereotype threat on older people's clinical cognitive outcomes: Investigating the moderating role of dementia worry, *The Clinical Neuropsychologist*, 31:8, 1306-1328.

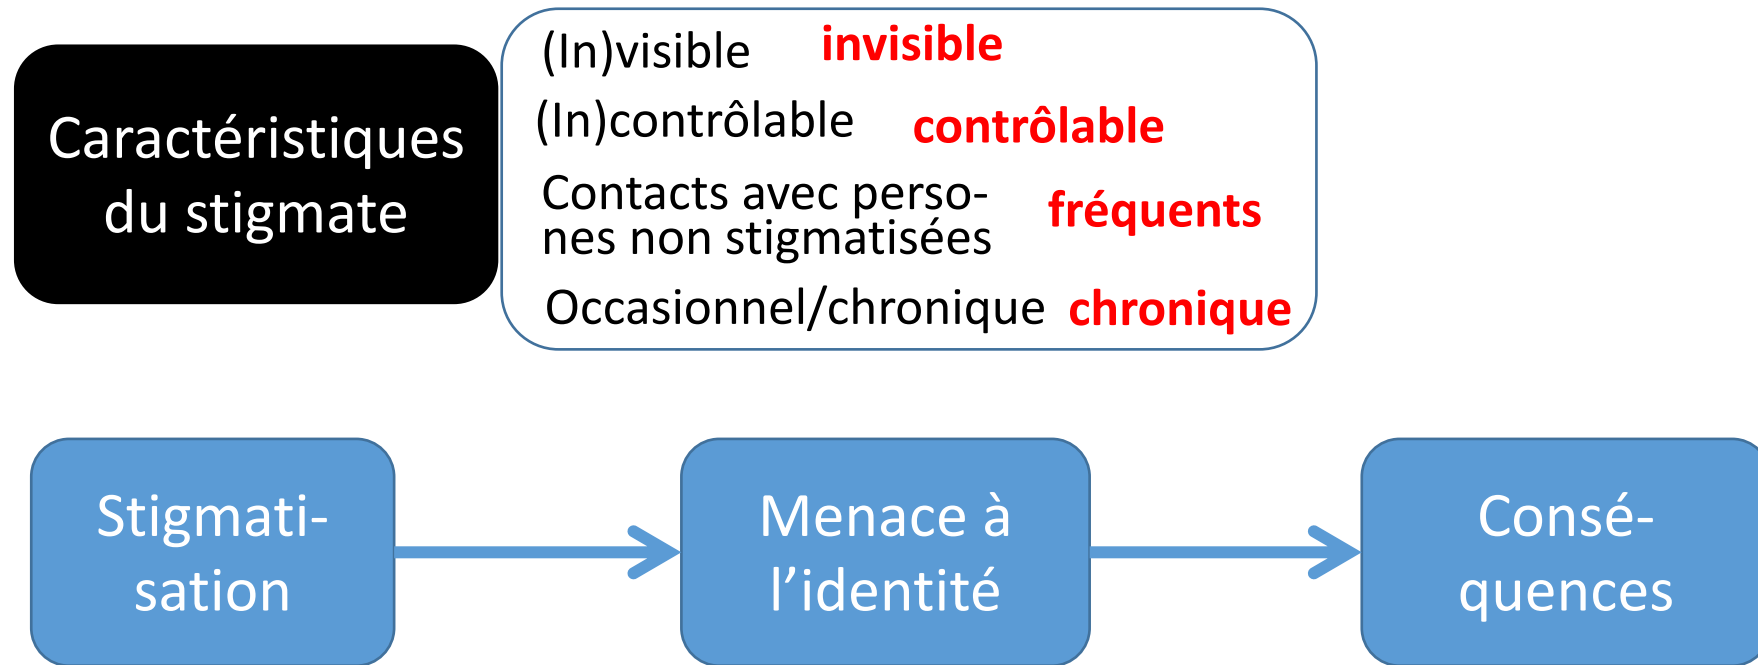

Negative condition : 'The brain deteriorates and some cerebral regions are less active with aging. Consequently, memory, attention, and processing speed deteriorate as well ...'

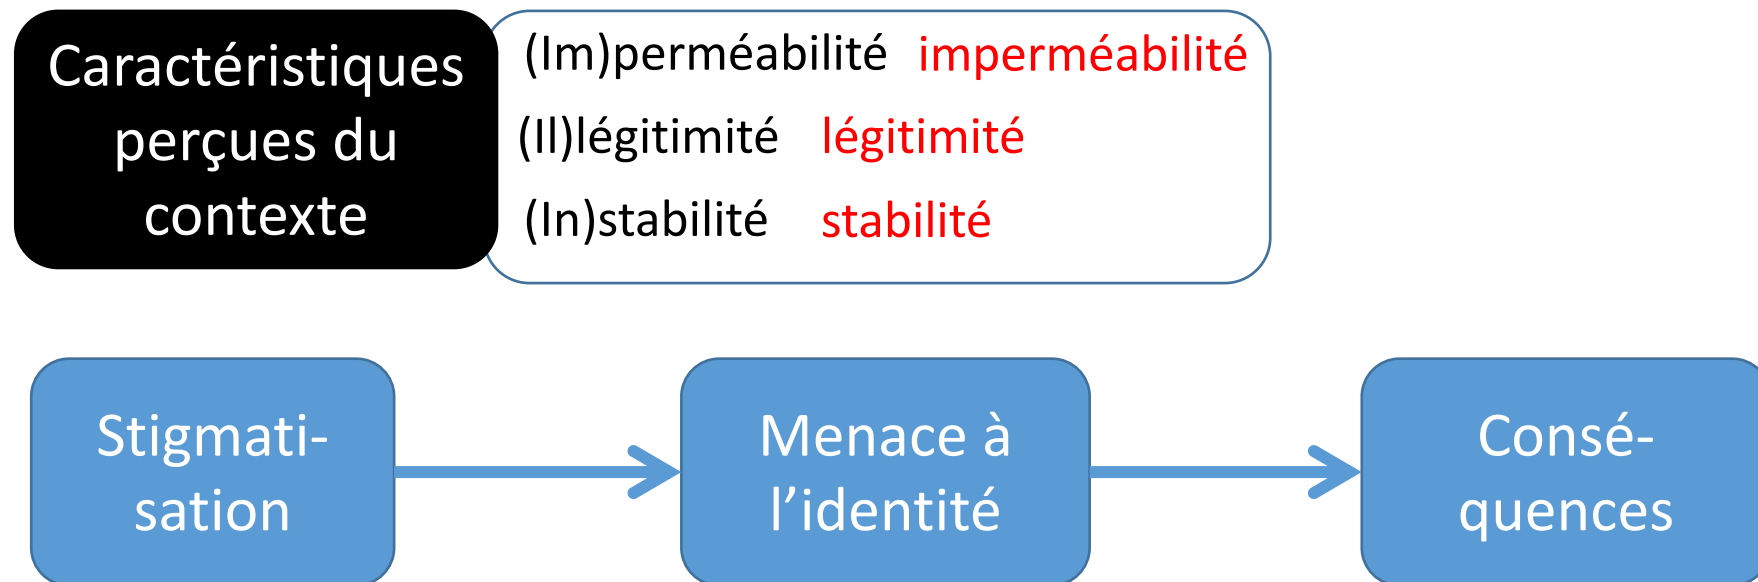

Positive condition : 'The brain does not uniformly deteriorate with aging. Some mental capacities, like memory, concentration and processing speed, are relatively well preserved ...'

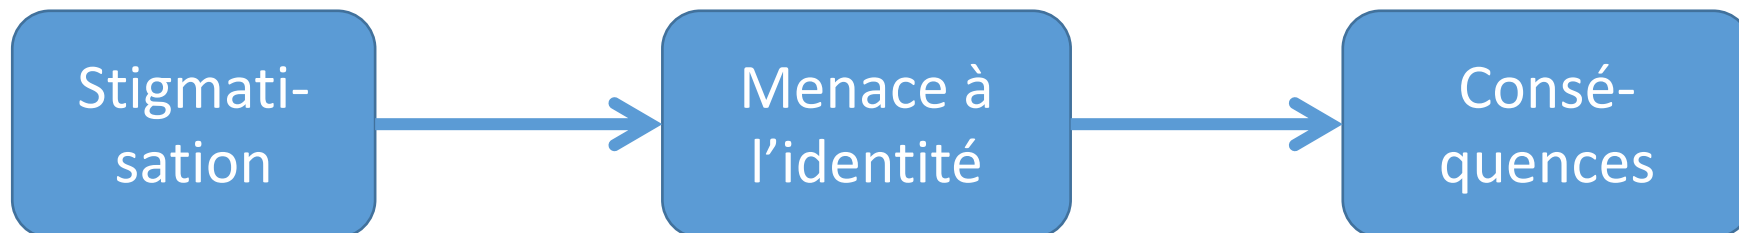

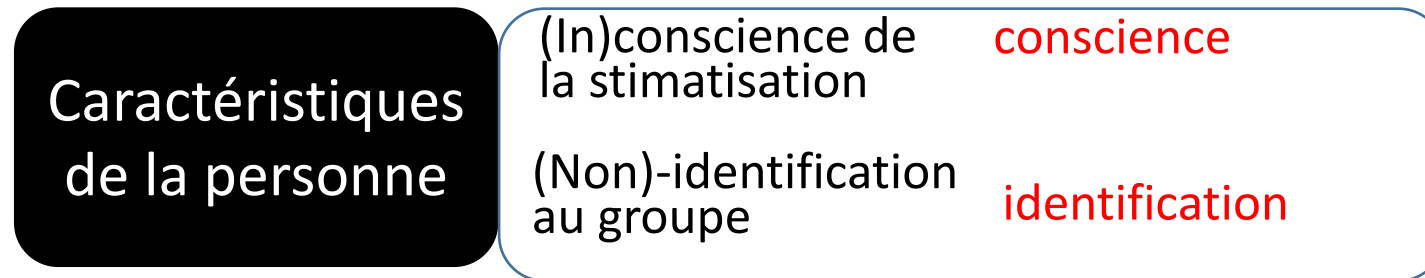

Au travail...

- Personnes âgées et désengagement (job engagement, commitment, and intentions to quit, von Hippel et al., 2019)
- Personnes âgées et informatique (Mariano, 2020)
- Femmes dans les disciplines STEM (downplaying the threat, Blaming self, Over-efforting, etc. (Block et al., 2019) et en chirurgie (Myers et al., 2020)
- Etudiants Black en médecine (Bullock et al., 2020)
- Femmes ingénieurs et decision de quitter (Singh et al., 2018)
- Etudiants immigrés et scolarité (GPA, Weber et al., 2018)
- Femmes en sport dans disciplines “masculines” (méta-analyses, Gentile et al., 2018)
- ...

Qu'est-ce qui augmente la perception de la **menace** ?

Stratégies pour faire face à la menace...

Se protéger

Individus

Rehausser

Groupe

Stratégies de protection de l'identité personnelle

Types de stratégie	Exemple
Changer de groupe de comparaison (endogroupe)	J'essaie de penser aux personnes qui s'en sortent moins bien
Diminuer l'importance accordée aux domaines menacés	La réussite professionnelle n'est pas chose importante pour moi
Attribuer l'échec à la stigmatisation	C'est à cause des préjugés envers mon groupe que je n'ai pas eu le job
Se donner des excuses (auto-handicap)	Je n'étais pas dans les meilleures conditions pour réussir

Stratégies de protection de l'identité sociale

Types de stratégie	Exemple
Diminuer l'importance de l'identité sociale	Appartenir à ce groupe n'est pas vraiment important
S'identifier à son groupe	J'essaie de me tourner surtout vers les membres de mon groupe (source de soutien)
Se dissocier de son groupe	Je me forme pour quitter ce groupe
Refuser le contenu de l'identité assignée	Il faut former les gens à ne pas recourir aux stéréotypes

Stratégies de rehaussement de l'identité personnelle

Types de stratégie	Exemple
Rechercher une autre identité, positive cette fois	J'essaie d'intégrer d'autres groupes sociaux J'essaie de faire régime
S'affirmer personnellement	Je m'investis dans d'autres activités valorisées (bénévolat...)

Stratégies de rehaussement de l'identité sociale

Types de stratégie	Exemple
Entrer en compétition contre un autre groupe	J'intègre une association de défense des droits de mon groupe
Réévaluer les dimensions du groupe	- l'originalité est une qualité - être gros est une marque de bonne santé
Mettre en avant des dimensions groupales positives	de toute façon, même si on n'est pas des intellectuels, on est de super bons sportifs
Affirmer (ou montrer) que l'identité sociale est positive	Nous sommes aussi forts qu'eux

Calendrier (Q1, lundi 9h – 10h30)

Introduction générale	15-9
Pourquoi? Lien social & stigmat	22 & <u>29-9</u>
Catégorisation (principalement la race)	13 & 20-10 ; 10 & 24-11
Sexisme (principalement les femmes)	8-12
